

# Nor140NNR Noise Nuisance Recorder

- System contained in small, tough, lightweight case to prevent damage (accidental or deliberate!) and provided with padlock to prevent interference
- System supplied with rucksack for discreet deployment
- Full fidelity audio recordings (NOT compressed audio) for reliable evidence gathering
- Up to 99 seconds full fidelity audio recording before hand switch is pressed
- Speedy download from Secure Digital memory card
- The new Norsonic Nor140 is a compact hand-held meter with Audio Record for noise nuisance investigations and also environmental noise measurements
- Levels logged once per second (or faster if necessary) for accurate detection of impulse noises – dogs barking, banging on walls etc
- Internal reference tone recorded for calibrated playback of audio recordings
- 3 year full manufacturer's warranty

**Nor140VID**  
 A simple-to-use system that integrates video recording with sound level measurements.

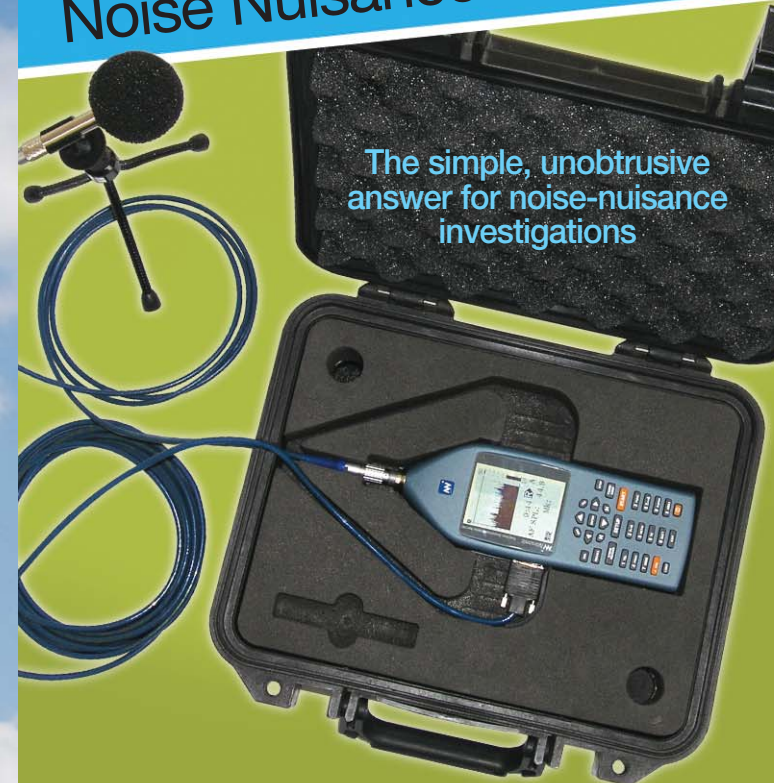

**Environmental Monitor**  
 The same system can be used with a weather protected microphone system for environmental noise measurements. Rechargeable battery packs power the system for short term measurements.

**Thermal Mini-Printer**  
 Plug in this compact printer (supplied with rechargeable battery pack and belt clip) and simply press 'print' for an instant measurement summary. Ideal for enforcement and fixed penalty notices.

# Nor140NNR Noise Nuisance Recorder

The simple, unobtrusive answer for noise-nuisance investigations

# Nor140NNR

A self-contained digital recording system

Compact

Discreet

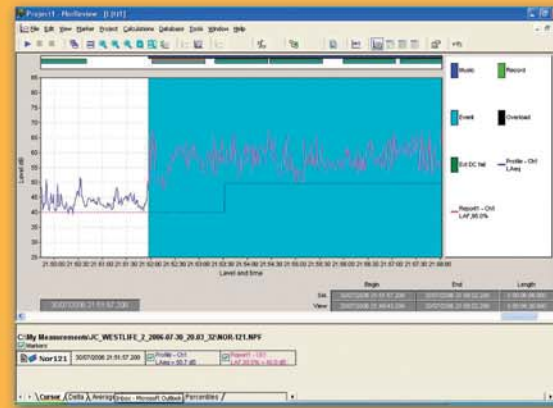

Easy to set up

Simple to use system and software

Easy to analyse

## Compact and discreet

The Nor140NNR system fits compactly into a tough, lightweight, padlockable case that fits snugly into a rucksack provided, for carrying discreetly to and from the site.

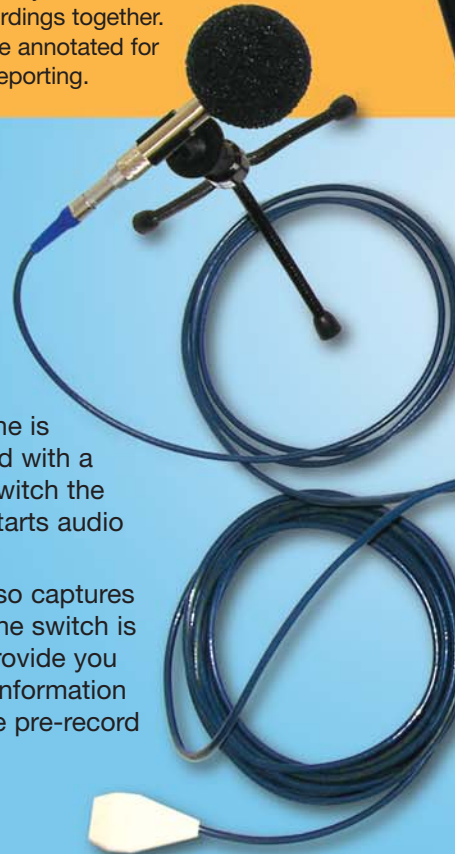

## NorReview Software

Analysis of the measurements with the NorReview software is quick and easy. A jump function enables you to jump to recordings where you simply click on the play button to listen to full fidelity recordings. The recordings and sound levels are synchronised and time-stamped with a moving cursor during playback to easily see levels and hear recordings together. Graphs can be annotated for professional reporting.

## Easy to set up

The microphone is positioned, and with a simple hand switch the complainant starts audio recordings.

The system also captures audio before the switch is activated to provide you with valuable information – thanks to the pre-record function.

## Easy to transfer

Sound levels and audio are logged to a Secure Digital memory card. This is easily transferred to the PC for storage and analysis.
